- Freelance journalist and author
- 1989 – 1998, Member of editorial staff at the magazine TLM 1989 – 1998

About Peter Antman

Started my professional carer as a journalist and social science researcher but changed course when I discovered Internet and Linux in the mid 90th and how fun it was to do software development and how good at it I was. I have however continued to be in or around the media business, and since I like to make things work better I have had different kinds of management responsibilities most of the time.

My passions lies in the intersection of human organization and technologies and goes in both direction: how to make organizations better by optimizing technologies, and vise verse.

I am a father of two sons and enjoy spending lots of time with my family - often at our summer cottage or doing some kind of outdoor activity - and friends. Training is an important part of my spare time, such as swimming, biking, climbing or running.

My latest book is about trekking in Padjelanta. Almost al of my writings can be found at http://antman.se

Experiences

Atex Product Development Manager Polopoly 2007 – 2012

Responsible for the product development department of the Polopoly WebCMS where we turned a small group of hackers into an almost 20 person hyperproductive development organization through an all encompassing implementation of lean and agile processes, with focus on quality, self organizing teams, customer value and a constant flow of releasable software. Part of which has been presented at Agila Sverige 2008, 2009 and 2011.

During 2012 I scaled product development with a remote team in Kuala Lumpur, Malaysia, which I lead during the build up phase.

Also involved in strengthening the support line and helped other parts of the company use agile concepts and put in place a high quality recruitment procedure.

I also did development and have among other things introduced the amazon cloud for our enterprise scale product testing and QA and was the initial driving force behind the Atex Tablet Publishing solution.

In 2012 Atex Polopoly presented a new Plugin architecture base on Maven and a collaboration platform of my design.

Mogul CTO 2006 – 2007

Responsible for strategic technical issues and competencies of 50 developers. Hired to build a business on open source consulting based on combining agile development, open source and ideas on software as a platform, or Software Market 3.0

Created an internal collaboration platform based on open source portal liferay and Twiki and was also part of the team building the internal VMWare based cloud.

Polopoly Product Developer 2004 – 2006

Core backend J(2)EE developer. Instrumental in delivery of version 9. Adapted the product to standard J2EE servers such as JBoss, Websphere and Weblogic and was responsible for the creation of a high quality product documentation.

Introduced eXtremeProgramming practices and built the foundation of a huge testing environment still in use.

Teknik i Media (Technology in Media) CTO 2002 – 2004 Systems architect 2000 – 2002

Mentor on Java, architecture and development methods and open source evangelist for two teams of developers. Introduced and build developed tools to support eXtremeProgramming practices.

Lead developer and architect for WAP-service at DN and a Lucene based search engine and an Instant News service at Sydsvenska Dagbladet.

Created one of the first Enterprise Service Bus systems, called Amsterdam on top of JBoss, used by Atex advertising system, and eventually released as OSS.

Responsible for several system analysis on how DN should build and adapt its IT-architecture to make better bussines on Internet.

Dagens Nyheter Systems architect 1999 – 2000, System developer 1998 – 1999

Backend developer for commercial web services such as Hemnet, Bostad and Köp och Sälj at Dagens Nyheter, both software development, IT-infrastructure and operations. Heavily involved in object oriented perl programming.

Inspired adoption of Linux as runtime platform and usage of open source software and created the open source site backsource.
